

# VidyoInsights

Dashboarding and analytics tool for on-premises and private cloud deployments

VidyoInsights is a performance monitoring system and analytics tool that allows customers to view infrastructure statistics centrally and helps them to understand KPIs of their infrastructure – such as, CPU, memory, threads, disk usage, and more.

VidyoInsights generates visual dashboards for trend analysis that provide reporting and central logging analysis required by admins who need server-level granularity.

## Business Benefits

- ✓ **Correlate and analyze disparate data**  
Bring data together under a seamless experience to help system administrators visualize and understand statistics from infrastructure and applications
- ✓ **Know how users are connecting**  
Optimize user experiences and workflows when you understand what type of endpoints employees are using to join video meetings
- ✓ **Spot trends for improved business planning**  
Understand usage patterns to justify or adjust your licensing model to avoid hitting limits
- ✓ **Identify issues in real-time**  
Proactively monitor server-level statistics and understand failure rates (future)

## IT Benefits

- Near real-time server-level metrics for VidyoPortal & VidyoRouter:
- ✓ **CPU Usage:** Check how compute is being used on your components over time
  - ✓ **Memory:** Monitor memory consumption of processes to determine trends
  - ✓ **Network:** Identify network issues before they impact video performance
  - ✓ **Disk:** Analyze trends of disk usage and trigger alerts
  - ✓ **Database:** Track database performance statistics to understand the impact of behaviors
  - ✓ **Processes:** Monitor key processes to understand when they may be outside of normal operation

Leverage visual dashboards for quick access to information:

Usage

Activity

Licensing

Server Metrics

**Professional Services:** Vidyo's dedicated implementation team will conduct the necessary planning to ensure the customer's integration is deployed quickly and efficiently. Additionally, training will be provided for the administrative staff to enable them to configure dashboards that illustrate peak utilization times and other key server performance metrics.
